## Die AUTOPSTENHOJ MagiX 35 DS as a multifunctional workstation

### What characterizes the MagiX 35 DS?

The AUTOPSTENHOJ double scissor lift MagiX 35 DS convinces as a **multifunctional workstation for small cars, flat sports cars, up to transporters**. Despite the high load capacity of 3.5 t a drive-over height of only 100 mm is achieved.

Due to the double master / slave system no safety ratchet and expensive compressed air is needed to operate the lift. The stable scissor construction ensures a high lateral stability of the lift and makes working under the vehicle much more relaxed.

Not least the standard hot-dip galvanized base frame promises a long service life of the lift.

## Press release

### Benefits & features of the MagiX 35 DS:

- Extremely flat, with maximum stability
- Double Master/Slave System: no compressed air or safety ratchet required
- Very flexible platform length from 1540-2250 mm
